

WHAT IS CLAIMED IS:

1. An event sending method in a digital broadcasting receiver for sending to an application an event corresponding to an input from a user, comprising:

    a step for accepting receivable event information identifying an event that is capable of being received by the application, the application capable of executing a process based on the event;

    a step for determining an application to which the event is sent based on application determining information that defines which application receives the event based on the receivable event information; and

    a step for sending the event to the application determined in the step for determining the application;

    wherein the determined application is a focused application.

2. The event sending method according to claim 1, further comprising sending the event to the focused application.

3. The event sending method according to claim 1, wherein the determination is based on stored application determining information.

4. The event sending method according to claim 1, in the step for accepting receivable event information, the receivable event information is accepted through a digital broadcast to the receiver.
